

[Sumo Arena]

[The Countdown Begins]

Timer function in Champion

Type: When this actor is created

Name: Timer

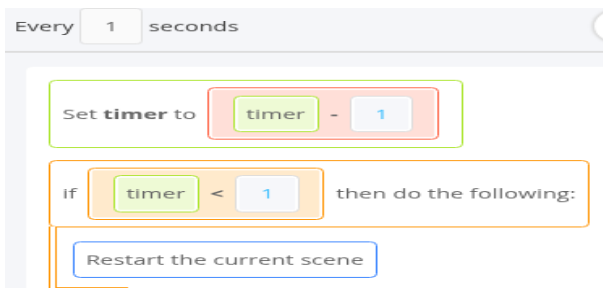

Create a new Owner variable `timer` with default value 20

Set timer to 20

Countdown function in Champion

Type: Every x seconds

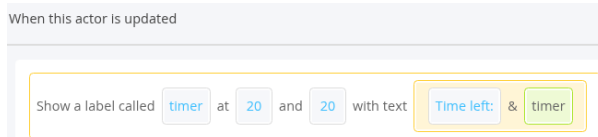

Name: Countdown

Label function in Champion

Type: When this actor is updated

Name: Labels

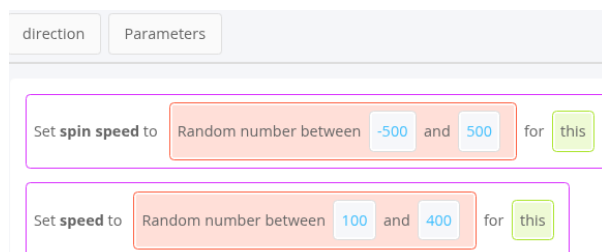

— Save Checkpoint —

[The Challengers Emerge!]

Create a Custom function `Direction` in Challenger

Type: Custom

Name: Direction

[The Challengers Emerge!]

Create Start function inside Challenger actor

Type: When this actor is created

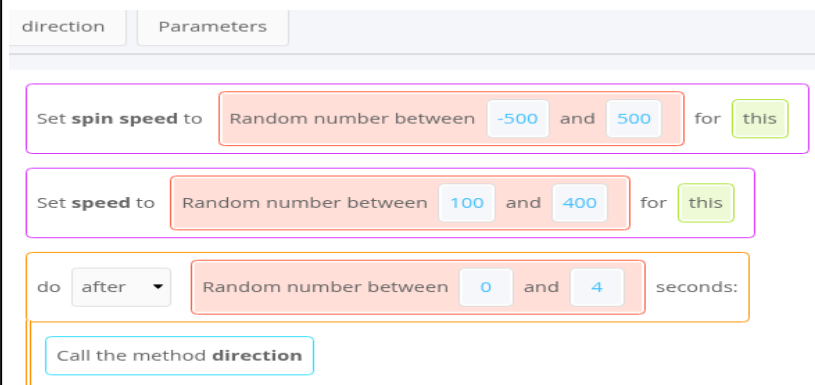

Name: Start

Drag `Call direction` from CUSTOM into the codebox

— Save Checkpoint —

Edit `Direction` function inside the Challenger actor

Drag `Do actions after some time` from `LOGIC` into codebox

— Save Checkpoint —

[Not that easy!]

Let add some challenge: If the challengers sense that they are too lose to the edge, they will move away from it. Create the Border AI function inside the Challenger actor

Type: When the actor is updated

Name: Boarder AI

When this actor is updated

If x of this < 60 then do the following:

Set X speed to xSpeed of this + 100 for this

else if x of this > scene width in pixels - 60 then do the following:

Set X speed to xSpeed of this - 100 for this

If y of this < 60 then do the following:

Set Y speed to ySpeed of this + 100 for this

else if y of this > scene height in pixels - 60 then do the following:

Set Y speed to ySpeed of this - 100 for this

[That's a knock Out!]

Create the Defeat function inside the Challenger

Type: When the actor is updated

Name: Defeat

Create a new game variable `score` with default value 0

When this actor is updated

If x of this < 0 or x of this > scene width in pixels then do the following:

Set score to score + 1

Remove this

else if y of this < 0 or y of this > scene height in pixels then do the following:

Set score to score + 1

Remove this

[How many so far?]

Challengers all done. Let's make it possible to see how many challengers defeated.

Edit the Labels function inside the Champion

When this actor is updated (RUNS ALWAYS)

Show a label called timer at 20 and 20 with text Time left & timer

Show a label called score at 20 and 50 with text Score: & score

[Onto the round]

If challenger<1, move onto the next level

Create the Win function under Champion

Type: When this actor is updated

Name: Win

When this actor is updated

If count items in list Find actors with name Challenge < 1 then do the following:

Go to next scene

— Save Checkpoint —

[A New Level]

Add scene

Name: Level 2

Cells across: 20

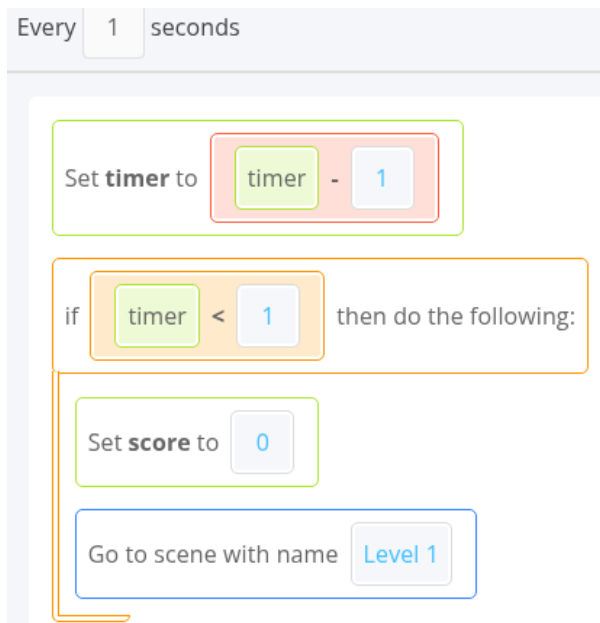

Cells Down: 20

Be sure to add a bunch of challengers to make it a challenge! Can you defeat them all within 20 seconds?

[Starting Over]

Our score should reset if we lose! We should also go to the first level so it is not too hard when we restart.

Edit the Countdown function in Champion

[High Score]

Let's have a record for how many challengers we've knocked out of the levels!

There won't be **too** much to having a high score!

1. Make a high score game variable.
2. Update the variable
3. Show the high score

[Extra content]

Create a game variable `highscore`

High Score

The `highScore` variable needs to be a **game** variable!

Actor: Champion - High Score

When this actor is updated

if `score > highScore` then do the following:

Set `highScore` to `score`

Actor: Champion - Labels

Block Code

Line Code

When this actor is updated

Show a label called `timer` at 20 and 20 with text `Time left: & timer`

Show a label called `score` at 20 and 50 with text `Score: & score`

Show a label called `highScore` at 20 and 80 with text `High Score: & highScore`

— Save Checkpoint —
